

# ANATOMY OF A BEE

**Antenna:** Sensory organs used for touch and smell.

**Thorax:** Middle section of the body where wings and legs are attached.

**Forewing:** The front pair of wings that help the bee fly.

**Hindwing:** The back pair of wings that provide stability during flight.

**Stinger:** A sharp structure on the abdomen that female bees use for defense.

**Abdomen:** The lower part of the body where organs and stinger are located.

**Tarsal Claw:** A gripping structure found at the end of a bee's leg.

**Femur:** The thigh part of a bee's leg.

**Tibia:** The segment of a bee's leg between the femur and the tarsal claw.

**Compound eye:** Large eyes made up of multiple individual lenses, allowing bees to see in multiple directions.
